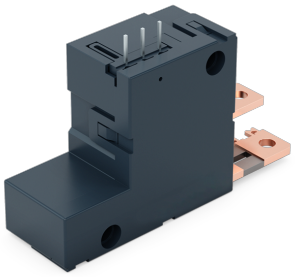
Technical data sheet

Relay 721

Description



For new developments we recommend to use relay type 725 or 726.

Polarized latching relay for 100 A

Using the H-armature principle the polarised latching relays are noted for their high resistance to shocks and vibrations. They are always in a defined switching position and therefore there is no loss of information in case of power failure. The advantage of polarised latching relays is the pulse driven operation of some milliseconds, coil heating can be neglected. Optionally the relay can also be set by manual operation.

The relays are designed and manufactured in accordance to international standards of IEC 61810 part 1 as well as they meet the UC3 requirements for Supply Control Switches as of IEC 62052 part 31.

Technical data

Coil data	Rated voltage	6 – 48 VDC
	Rated power	4.5 W
	Operating power to set	3.0 W
	Pulse to set	20 ms
	Action time	< 15 ms
Contact data	Max. contact arrangement	1 NO
	Contact material	$AgSnO_2$
	Max. switching power	25000 VA
	Max. switching voltage	440 VAC
	Rated switching current	100 A
	Mechanical life	10^6
Insulation	Creepage and clearance distance coil - contact	8.0 mm
	Test voltage coil - contact	V eff.
	Test voltage contact- contact	V eff.
	Test voltage open contact	V eff.
	Dielectric strength coil - contact	12 kV / 1,2 / 50 µs

P.O. Box 1149
Tel: +49 7426 948-0 | Fax: +49 7426 948-200 | www.gruner.de | info@gruner.de

Technical data

General data	Ambient temperature	-40 … +85 °C
	Weight	75 g
	Conform to	VDE, UL (E151314-x-3), CSA, SEV, SEMKO

Standard windings

Standard winding No. Double winding	Nominal coil voltage (VDC)	Operating voltageof the coil U1 - U2 (VDC)	Coil resistance (Ohm)	Tolerance (± %)
8R0	6	4,8 - 7,8	2 x 8	10
032	12	9,6 - 15,6	2 x 32	10
125	24	19,2 - 31,2	2 x 125	10
500	48	38,4 - 62,4	2 x 500	10

Contact position		
Terminal-grid	H 1(-)/5(+) B 3(-)/4(+)	2(-)/5(+) 2(-)/4(+)

The relay can also be used with a single winding (lower operating power to set) if the middle pin of coil is not used. Furthermore, the magnet's polarization can also be adjusted to meet the customer's specific drive circuit requirements.

Identification

Identifcation code	
Type	721
Terminal configuration	A = see dim. drawing C = see dim. drawing CR = see dim. drawing D = see dim. drawing DR = see dim. drawing F = see dim. drawing G = see dim. drawing FR = see dim. drawing V = see dim. drawing VR = see dim. drawing
Contact material	R = $AgSnO_2$
Contact arrangement	1A = 1 normally open
Terminal-grid	B / H
Winding No.	see coil table

Advice for soldering:

The relay is dust-protected. Take care to avoid that flux medium and lead-tin resp. their evaporations enter into the relay, i.e. the printed circuit board must not be flooded.

Extended storage could impact solderabilty due to increased oxidation on the terminals.

Shunt:

The Shunt is used to measure the energy consumed and, as it is integrated in the relay, can be utilised for load shedding in “Energy Management”. Two connectors are located on the terminal close to the shunt and only carry the current sensor signal. A third connector is the reference signal for the electronics and is located on the supply side of the terminal to avoid RF sensitivity.

The power terminals can be modified according to customer specification.
